

BROME MANAGEMENT SCHOOL

Smooth brome grass is still a valuable part of many livestock and forage operations in northwest Missouri but requires proper management to persist in a forage system. This meeting from MU Extension will offer tips on managing brome to maintain it as a viable forage resource.

TOPICS:

- Harvest recommendations for productivity and persistence
- Fertility—what's needed and when
- Incorporating legumes and other species
- Quality considerations
- Assessing brome stands for recovery or renovation
- Weeds, insect pests, and diseases

Thursday, August 22, 2013

8:30-11:00 a.m.

**Graves-Chapple Research Center
Corning, MO**

\$10 per person to attend

Please call or e-mail your registration by 8/20/13
